Question 1
0 / 1 pts

Which file types are mostly or entirely in machine language binary and unintelligible to humans? Choose U for unintelligible and I for intelligible.

1. C file [Select]
2. Assembly file [Select]
3. Object file [Select]
4. Executable file [Select]

Answer 1:
(You left this blank)
I
U
Answer 2:
(You left this blank)
I
U
Answer 3:
(You left this blank)
I
U
Answer 4:
(You left this blank)
I
U

Question 2
0 / 1 pts

The tool that translates high-level language to assembly is called [Select] .

The tool that combines object files to create one executable is called [Select] .

The tool that translates assembly to machine code is called [Select] .

Answer 1:

(You left this blank)

compiler

assembler

linker

loader

Answer 2:

(You left this blank)

compiler

assembler

combiner

linker

Answer 3:

(You left this blank)

assembler

translator

compiler

linker

Which ones are acceptable ways to declare a pointer?

- int *a; [Select]
- int &a; [Select]
- int a*; [Select]
- int a&; [Select]

Answer 1:

(You left this blank)

acceptable

not acceptable

Answer 2:

(You left this blank)

acceptable

not acceptable

Answer 3:

(You left this blank)

acceptable

not acceptable

Answer 4:

Question 4

0 / 1 pts

What is the value in the last variable in each of the statements below (the int # variable in the last line)?

1. int x = 5;
2. int* y = &x;

[Select]

1. int x = 5;
2. int* y = &x;
3. int z = *y;

[Select]

1. int x = 5;
2. int* y = &x;
3. y = y + 1;
4. int z = *y;

[Select]

Answer 1:

(You left this blank)

the memory address of x

5

there is an issue

something random

Answer 2:

(You left this blank)

the address of x

the address of y

5

something random

there is an issue

Answer 3:

(You left this blank)

the address of x

the address of y

5

6

something random

there is an issue

Question 5

0 / 1 pts

```
typedef struct {
    int x, y, z;
    char c;
} bunch_t;

void WorkwithBunch(bunch_t inputBunch)

// later inside the main:
   bunch_t myBunch = {1, 2, 3, '7'};
   bunch_t *bunchPtr = &myBunch;

// How should we call WorkwithBunch?
   WorkwithBunch(bunchPtr); //  option 1
   WorkwithBunch(*bunchPtr); // option 2
   WorkwithBunch(&bunchPtr); // option 3
```

Consider the above snippet. What option is the correct way to call the WorkwithBunch function?

- Option 1
- Option 2
- Option 3
- None

Which one is bit 23 mask (BIT23)?

- (1<<22)
- (1<<23)
- (1<<24)

Unanswered

Question 9

0 / 1 pts

A single-bit bitmask is a bitstring where all the bits are 0 except for a single bit, which is 1. If that single bit is located at index i, we call the bitmask BITi. For example, BIT0 is equal to 1 and BIT1 is equal to 2 and BIT2 is equal to 4, and so on. If we intend to reset bits 10 and 20 of an integer, and we like to create

a macro mask, what should go in the blank space below?. If we intend to reset bits 10 and 20 of an integer, and we like to create a macro mask, what should go in the blank space below?

```
#define NEW_MASK ....
x = x & ~NEW_MASK;
```

- (BIT10 | BIT20)
- BIT10 | BIT20
- BIT10 & BIT20
- ~(BIT10 | BIT20)

Question 11

0 / 1 pts

Consider a Schmitt trigger with two thresholds at 1.4V and 1.6V. Also, assume the logic 0 is 0V, and logic 1 is 3V.

1. What is the output of the Schmitt trigger when the input is 0.2V? [Select]
2. What is the output of the Schmitt trigger when the input is 1.55V? [Select]
3. What is the output of the Schmitt trigger when the input is 2.33V? [Select]

Answer 1:

(You left this blank)

0.2V

0V

3V

We cannot tell. It depends.

Answer 2:

(You left this blank)

1.55V

0V

3V

We cannot tell. It depends.

Answer 3:

(You left this blank)

2.33V

0V

3V

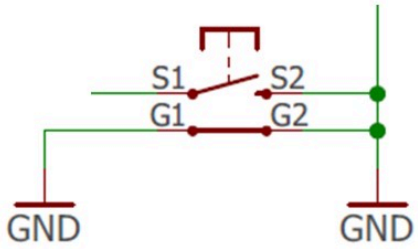

We cannot tell. It depends.

Question 12

0 / 1 pts

Consider the two below setups for a pushbutton. In order for them to work properly which statement should be correct?

Configuration (A)

Configuration (B)

1. Configuration A [Select] .
2. Configuration B [Select] .

Answer 1:

(You left this blank)

needs a pull-up resistor.

needs a pull-down resistor.

does not need any pull resistor.

Answer 2:

(You left this blank)

needs a pull-up resistor.

needs a pull-down resistor.

does not need any pull resistor.
